

IPFusion CORRECTIONS Solution

Safety. Security. Control

Correctional facilities require uncompromising levels of safety and security and the ability to manage and resolve critical incidents as it unfolds. This demands 24/7 access to- and control of all operational security systems.

A logical resolution to this challenge is the integration and collaboration of seemingly unrelated operational and security systems with all data extracted and displayed across a **single pane of glass**, or one screen.

IPFusion can do just that! IPFusion connects to various systems from video surveillance, access control and intercoms to intrusion alarms, perimeter control and many more. It responds to alerts in real-time and provide cross-system information on one dashboard. The security officer now has a comprehensive view of the state of the facility and can respond to a series of threats and incidents at once.

IPFusion conveniently integrates various operational systems into one pane of glass to provide full control, safety and security.
